

3-axis architectural factorial — HSiKAN $\times$ CPML $\times$ Clifford-FIR

Pre-registered hypotheses:

H1: $\varphi > 0$ on Bitcoin OTC

H2: $\alpha > 0$ on Slashdot/Epinions

H3: $\gamma > 0$ on Epinions/WikiSigned

H4: $\alpha\varphi > 0$ on dense signed graphs

Effect decomposition:

$$L = \mu + \alpha A + \gamma C + \varphi F \\ + \alpha\gamma AC + \alpha\varphi AF + \gamma\varphi CF \\ + \alpha\gamma\varphi ACF + \varepsilon$$

μ : embedding floor

α : HSiKAN main effect

γ : CPML main effect

φ : FIR main effect

$\alpha\gamma, \alpha\varphi, \gamma\varphi$: pairwise interactions

$\alpha\gamma\varphi$: 3-way interaction
