

Gömb hyperparameter search (random)

ops

2026-05-12

Scope. Random search over learning rate, embedding width, outer bank count, `topk`, tier count, Adam `weight_decay`, optional `pos.weight` (train-set balance), and occasional mixed arity 3,4 cycles. Driver: `signedkan.wip/src/run_gomb_tune.py` subprocesses `run_gomb_smoke` with 80_10_10 split for `test_auroc`. No new Python dependencies.

Rollback. Delete JSONL artifacts; remove script invocation; training defaults unchanged.
